CAREER OBJECTIVE

Full-stack developer and B.Tech CSE student with hands-on experience building production-grade web applications using React.js, Node.js, Express.js, TypeScript, MySQL, PostgreSQL, and MongoDB. Experienced in designing scalable REST APIs, authentication systems, database architectures, and deploying production applications. Seeking a Full Stack Developer role to build secure, scalable, and high-performance web applications.

EDUCATION

QUALIFICATION	INSTITUTION	YEAR	SCORE
B.TECH CSE	BRAINWARE UNIVERSITY	2023 - Present	CGPA: 8.74
Higher Secondary	Nandanpur High School	2021 - 2023	67%
Secondary	Nandanpur High School	2015 - 2021	89%

SKILLS

Languages: C, Java, JavaScript, TypeScript

Frontend: HTML, CSS, React.js, Tailwind CSS

Backend: Node.js, Express.js, Socket.io

Database: MongoDB, PostgreSQL, MySQL, Redis

Authentication & Security: JWT, bcrypt, Role-Based Access Control (RBAC)

Tools & Platforms: Git, GitHub, Postman, Cloudinary, Render, Vercel, Zod

Concepts: REST APIs, Database Design, System Design, Responsive Web Design, Production Deployment, Environment Variables

EXPERIENCE

Software Development Intern

Aelyra Lab Private Limited

📅 07/2026 📍 Kolkata, West Bengal, India

- Developed a production-ready geo-tagging platform using React, Node.js, Express.js, and MySQL.
- Built secure REST APIs with JWT authentication and RBAC.
- Designed a scalable multi-tenant database supporting Companies, Projects, Sites, Sub-sites, and dynamic Asset Types.
- Collaborated on API documentation, testing, deployment planning, and production-ready backend architecture.

Intern

Codersgram Solutions LLP

📅 01/2026 📍 Remote

- Built and maintained full-stack features for production web applications using the **MERN stack**, contributing across **frontend UI**, **backend APIs**, and **MongoDB** database layers.
- Integrated **REST APIs** into React components, improving data flow between client and server across multiple application modules.

- Followed production-grade development practices including **Git** branching workflows, code reviews, and modular **Express middleware** design, reducing code duplication across routes.

PROJECTS

Aelyra Geo-Tag Management System

🔗 <https://geovisit.brickway.in>

Tech Stack: React.js · Node.js · Express.js · MySQL · JWT · REST APIs · Multer · Zod.

- Developed a full-stack geo-tag management system for renewable energy projects using Node.js, Express.js, and MySQL.
- Built 50+ REST APIs with JWT authentication, RBAC (Super Admin, Admin, Project Manager, Field Employee), and modular backend architecture.
- Designed a scalable multi-tenant database supporting Company → Project → Site → Sub-site, dynamic asset types, and configurable inspection fields.
- Developed a responsive admin dashboard for project management, user administration, geo-tagged reports, image uploads, and system configuration.

Connectimi – Professional Networking Platform

🔗 <https://connectimi.in>

Tech Stack: Node.js · Express.js · MongoDB · Redis · JWT · Cloudinary · Zod.

- Developed a scalable backend for a professional networking platform supporting networking, job recruitment, messaging, courses, and consultancy services.
- Built secure REST APIs with JWT authentication, email OTP verification, Zod validation, Redis caching, and production-grade security middleware.
- Designed a modular controller–service architecture integrating MongoDB, Cloudinary, Nodemailer, and Redis for media storage, email verification, and session management.
- Managed backend deployment on Render, configured production environment variables, monitored deployments, resolved deployment issues, and maintained production releases.

Synchronus — Real-time Chat Application

🔗 <https://synchronus.vercel.app/>

Tech Stack: React 18 · Node.js · Socket.io · MongoDB · Redis · JWT · Zod

- Engineered real-time bi-directional messaging using **Socket.io** with WhatsApp-style **message status ticks** (sent → delivered → read).
- Integrated **Redis (ioredis)** for online presence tracking and last-seen timestamps, enabling live user status without database polling.
- Built **JWT + bcrypt authentication** with protected **REST API** routes across 3 route groups: Auth, Contacts, and Messages (8+ endpoints).
- Implemented file sharing (images & attachments) via **Multer** with a dynamic DM sidebar that automatically sorts contacts by latest message.
- Managed client-side state using Zustand with a dedicated Socket.io context, and validated all inputs server-side using **Zod schemas**.

SMP — Student Management Platform

🔗 <https://smp-arnab.vercel.app/>

Tech Stack: React · Express.js · MongoDB · JWT · HTTP-only Cookies · shadcn/ui · Zod.

- Designed a 3-tier **hierarchical data model** (Class → Batch → Student) with 5 Mongoose **schemas** and 5 dedicated **Express routers** (Admin, Teacher, Student, Class, Batch).
- Implemented **dual-layer auth middleware** — isAuthenticated (JWT via HTTP-only **cookies**) and authorizeRole — enforcing strict **RBAC** across all routes for 3 user roles.
- Built 3 fully separate React dashboards (Admin, Teacher, Student) with protected routes via a **ProtectedRoute** HOC and role-aware navigation.
- Integrated TanStack React Query for **server-state caching** and **React Hook Form + Zod** for type-safe form validation across all management pages.
- Delivered **10+ management pages** including bulk student registration, teacher assignment, exam management, and class/batch **CRUD** operations.
